DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

2. In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-3, 25-27 and 35 are drawn to the use of an assay for adenylate kinase in an in vitro test and a method for determining the growth phase of a bacterial culture.

Group II, claims 4-20 and 36 are drawn to a method for determining the susceptibility of bacteria to a reagent.

Group III, claims 21-24, 28-34 and 37 are drawn to a method for determining the sensitivity of bacteria to an antibiotic or biostatic agent.

3. The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Group I is the use of an assay and a method for determining the growth phase of a bacterial culture. The method uses two samples to assay for adenylate kinase. The method of group I also

does not employ a lytic agent. Finally, the method determines the growth stage of the culture. No other group determines the growth phase or uses two samples without a lytic agent. There is no corresponding technical feature between group I and any other group.

Group II determines the susceptibility of bacteria to a reagent. This method uses lysed bacteria and exposes it to a reagent. The method also comprises a separation and incubation step. No other group comprise similar step or determine similar results, therefore Group II has different technical features then any other group.

Group III's method determines the sensitivity of bacteria to an antibiotic or biostatic agent using four different samples and comparing the samples to determine the sensitivity or resistivity of the bacteria. The method can employ immunocapture techniques. No other group has similar techniques or reagents. Group III has different steps and determines a different result when compared to the other groups.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1645

remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
